

In the Valley, Burns Aren't Just From Flames

Protect Yourself & Others From
Contact Burns

What Are Contact Burns?

Contact burns occur when skin comes in contact with a **hot object or surface**.

They are the **third most common** cause of burn-related injuries.

Who is Most at Risk of Obtaining Contact Burns?

- Seniors
- Children
- Outdoor Workers
- Non-Locals and Visitors
- Individuals Experiencing Homelessness
- Those with Neurological or Cardiac Conditions
- Pets

What is Heatstroke?

Heatstroke is a condition that affects the **whole body's** central nervous system, including the brain, kidneys, liver, lungs, hearing, etc.

It can happen **fast**, especially if someone is dehydrated or unable to move away from the heat.

The **Connection** Between

Contact Burns and Heatstroke

Contact burns and **heatstroke** often go hand in hand.

The **danger** of contact burns isn't **just** the initial injury - it's **how long** someone stays on a **hot surface**.

Prolonged contact raises **internal body temperature**, which can lead to **heatstroke**.

Don't Wait to Seek Care

- Even small burns can be **deeper than they appear**. Delaying care can lead to **serious complications and damage**.
- Seek medical care **immediately** if you, or someone you know, has **suffered burns** from hot pavement or other surfaces.
- When in doubt or if you think a life is in danger, **call 911**.

Burn injury care you can trust.
